## Experience

---

### Website Redesign For Molecular Biophysics At FSU

Spring 2011 - Summer 2011

I worked with a team to redesign the Molecular Biophysics department's website. They wanted to receive more applicants to their graduate program so our team worked to make their website more user friendly and more enticing to students. We used Wordpress for the website and then customized it to the clients needs. We also made a social media presence for the client so that they could better interact with students. We taught the client how to use Wordpress so that they could easily update their site without having to consult a programmer.

### Personal Project: Home Linux Server

2010 - Current

At the start of 2010, I purchased a PC for the purpose of setting up a Linux server at home. I have Ubuntu Server currently installed and am constantly tweaking the installation to suit my needs. I use it as a file / media server so that I can access all of my files from anywhere in the house or anywhere that I have an Internet connection and access to an SSH client. This personal project has given me a lot of experience with Linux and working in a command line environment. It has also helped improve my problem solving abilities since there were many challenges to overcome.

### Personal Work Experience: Computer Repair / Maintenance

2003 - Current

For as long as I can remember I have been working on computers. During freshman year of high school I started fixing peoples computers for pay. Some of the things I have done over the years are Virus & Spyware Removal, Hard Drive Recovery, Software Installation, OS Reinstallation, Custom PC Builds, Hardware Repair and even some Software Training. Doing this for the past 8 years has greatly improved my problem solving skills and patience when dealing with less computer literate people.

## Education

---

### Florida State University: BS in Information Technology

Fall 2007 – Spring 2011

## Skills

---

### Experienced with:

- Mac OS X
- Windows (XP, Vista, 7)
